

**Project Name: Boston University**

**Project Location: Boston, MA**

**Project Overview**

For the 5-story Life Sciences laboratory facility at Boston University, one of the project requirements prior to commencing the installation was to provide a fully functional mock up due to the complexity of the casework. This allowed the owner, the architect, the general contractor and the other associated trades to inspect and make revisions to the benching. This mock up proved very helpful in coordination with the other trades, and was a main component to the success of this project.

- CiF Premium Maple Wood Casework
- CiF Complete Equipment Package

**Project Statistics**

- Budget: \$3.5 million

**Project Participants**

- Architect: Cannon Design
- General Contractor: Turner Construction Company
- Dealer: CiF Lab Solutions Direct
