

CiFLAB
SOLUTIONS

E-Line Series

Premium wood casework that is expected to be used in design of educational teaching and research science laboratories. Using CiF's wide range of options, you can create the appropriate cabinet for any application. By using parametric engineering for easy cabinet modifications and versatility of many veneer species / cuts, the E-Line by CiF Lab Solutions is the perfect choice for your interior build-out.

Stretcher rail construction consists of a horizontal front rail and two vertical back rails that are dove-tailed into the cabinets ends...providing excellent structural rigidity and strength

Drawer boxes consist of 1/2" 9-ply Baltic birch plywood dove-tailed on all 4 joints. The drawer bottom is a 1/4" MDF board with a white thermo-fused melamine, captured on all four sides and glued in place. Drawer fronts are applied separately.

All door and drawer fronts shall be **vertically grain matched** within the same cabinet.

Hardware: various hinge, pull, drawer slide, locks and catches of laboratory grade are used in the cabinet construction (per specification details).

Flat-line finishing provides a finish that meets AWI Quality Standards and SEFA 8-1999 Chemical Resistance Specifications. Our finish is our signature.

An extensive list of "AA" grade veneer choices are available (including Red Oak, White Oak, White Maple, Birch, European Steamed Beach, Cherry and Bamboo). Our veneers for door and drawer fronts are procured as "unsanded", allowing final sanding after edge-banding in our factory. This unique process provides for a "truly finished" 1/45" thick veneer that AWI requires. It also leaves a superior finish that will enhance the quality of a customer's installation.

SEFA (Scientific Equipment Furniture Association)... as a SEFA member, CiF builds their standard cabinets in compliance with all SEFA requirements.

AWI and AWI Premium construction guidelines and materials are referenced and followed (with your project specification requirements given priority) in casework construction at CiF Lab Solutions.

FSC and NAUF materials are available to assist in meeting your project's environmental objectives.

For materials and construction methods, refer to our specifications.
