# ColorSplash
Possibilities Guide

ColorSplash is a designer series of stain colors giving you a world of possibilities and options to create unique and distinctive lab spaces and learning environments! ColorSplash colors are applied on specially selected reconstituted veneers to enhance the stain colors and to bring out the natural beauty of wood grain.

With ColorSplash the possibilities are endless. You can use one stain color throughout an entire project (CS-1 Type Project) or you can use a two-tone cabinet theme (CS-2 Type Project) or you can create different color combinations and color accents throughout an entire project (CS-3 Type Project). Additionally, you can incorporate cabinets with natural veneers (oak or maple only) in combination with cabinets and/or components using ColorSplash reconstituted veneers (CS-4 Type Project).

*ColorSplash colors are only available on our specially select reconstituted veneer.
*Natural veneers are only available in CiF standard stains and finishes.

CS-1 Type Project
"One ColorSplash Color"

One ColorSplash color will be used for the entire project. The cabinet body (including shelving), back panels (if veneer back is selected), doors, and drawer fronts will all be in one of our ColorSplash color selections.

*ColorSplash colors are only available on our specially selected reconstituted veneer.

CS-2 Type Project
"Two-Toned Cabinet"

The cabinet body (including shelves) and back panels (if veneer back is selected) will be one ColorSplash color, while the doors and drawer fronts will be a different complimentary ColorSplash color creating a unique color combination for the entire project.

*ColorSplash colors are only available on our specially selected reconstituted veneer.

CS-3 Type Project
"Multiple ColorSplash Colors"

The possibilities are endless using a CS-3 Type Project. Multiple colors and color combinations can be used throughout an entire project. With a CS-3 Type Project, you can create color combinations choosing the same or different colors for the Fronts (door and drawer fronts), Body (cabinet body and shelves), and Backs (back panels). Each selected combination creates a unique ColorSplash scheme that can be used throughout the project. For additional details and information on the color scheme identification process, please refer to page 2.

*ColorSplash colors are only available on our specially selected reconstituted veneer.

CS-4 Type Project
"Both Natural Veneer and ColorSplash"

Enhance the beauty of your natural wood veneer project by adding a splash of color! With a CS-4 Type Project, you can create color combinations choosing the same or different colors for the Fronts (door and drawer fronts), Body (cabinet body and shelves), and Backs (back panels). The color combinations selected for a cabinet type will create a Front/Body/Back color scheme. Natural veneers and ColorSplash veneers can be combined in one cabinet. For additional details and information on the color scheme identification process, please refer to page 2.

*ColorSplash colors are only available on our specially selected reconstituted veneer.
*Natural veneers are only available in CiF standard stains and finishes. ColorSplash colors are not available on natural veneers.

# ColorSplash
Possibilities Guide

CS-3 Type Project
• Cabinets are constructed using a reconstituted straight grain veneer finished with ColorSplash colors or a transparent finish. Natural veneers are not used in a CS-3 project.
• Color combinations are defined by Front/Body/Back
- Front: Doors and drawer fronts must be the same color per cabinet
- Exception: Split height tall doors can have 2 distinct colors per pair of doors
- Body: Complete cabinet body, includes shelving must be the same color per cabinet
- Back: Backs on individual cabinets can be different then the cabinet body. Semi-exposed backs (backs behind door cabinets) can be hardboard if selected.
• Pipe chases, wall shelving and other miscellaneous items can be finished with ColorSplash colors, the entire component must be one color.
• Cabinet schemes must be created for each color combination. Open, semi-exposed and concealed cabinets can utilize the same scheme if color combinations are the same
**A CiF BIM team member would be happy to help you design and plan your ColorSplash project! Please contact us for assistance or questions.**
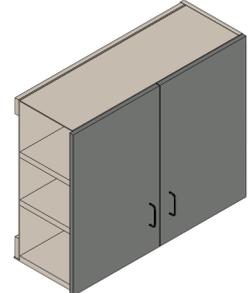

COLOR SCHEME A	
Fronts	Montauk Blue
Body	Montauk Blue
Backs	Montauk Blue

COLOR SCHEME B	
Fronts	Montauk Blue
Body	Greige
Backs	Cement

COLOR SCHEME C	
Fronts	F1- Montauk Blue
	F2- Beach Sand
Body	Cement
Backs	Cement

| COLOR SCHEME D	
Fronts	Cement
Body	Greige
Backs	Greige

CS-4 Type Project
• Project combines natural veneers (available in our standard stains and finishes) with ColorSplash colors on reconstituted straight grain veneer. Any combination of natural veneers and Colorsplash components can be combined.
• Color combinations are defined by Front/Body/Back
- Front: Doors and drawer fronts must be the same color per cabinet
- Exception: Split height tall doors can have 2 distinct colors per pair of doors
- Body: Complete cabinet body, includes shelving must be the same color per cabinet
- Back: Backs on individual cabinets can be different then the cabinet body. Semi-exposed backs (backs behind door cabinets) can be hardboard if selected.
• Pipe chases, wall shelving and other miscellaneous items can be finished with ColorSplash colors, the entire component must be one color.
• Cabinet schemes must be created for each color combination. Open, semi-exposed and concealed cabinets can utilize the same scheme if color combinations are the same.
