

**Project Name: Sensient Technologies****Project Location: Chicago, IL****Project Overview**

This project required the relocation of three North American business units and their corresponding laboratories to a new 66,000 sq. ft. facility. While designing and renovating this new facility, CiF was challenged with creating a space that would meet the client's current and future laboratory needs while staying within budget. As the industry's total solution provider, we were able to design a facility that met these requirements within a six month start to finish deadline. This state-of-the-art space has analytical laboratories, private office and workstations, and demonstration room.

- CiF Premium E-Line Caramelized Wood Casework
- CiF Apex Air Fume Hoods
- CiF Summit Flexible Lab Table System
- CiF Complete Equipment Package

Project Statistics

- Project Size: 66,000 sq. ft.
- Total Construction Budget: \$13 million
- CiF Contract: \$1.7 million

Project Participants

- Architect: Epstein
- Laboratory Planner: SRA, Inc.
- General Contractor: Pepper Construction
